Professional Summary

Software Developer with experience building full-stack web applications, database-driven systems, and role-based access control. Proficient in React, Next.js, TypeScript, Python, SQL, and Firebase, with additional experience in data analytics and machine learning workflows.

Experience

Software Developer Mar 2026 – Present
Sixs Sports Business & Solutions Inc. *Bengaluru, India*

- Develop data-driven applications supporting clinical operations, sports science assessments, scheduling, inventory, and reporting workflows.
- Build application features and database integrations to support data processing, validation, and operational automation.
- Implement role-based access control (RBAC) and collaborate with stakeholders to translate operational requirements into software features.

Data and Development Analyst Intern Dec 2025 – Feb 2026
Sixs Sports Business & Solutions Inc. *Bengaluru, India*

- Built a Clinical Management System using Next.js and Firebase to automate patient scheduling, billing, and facility operations based on requirements gathered from clinical stakeholders.
- Developed a dual-app ecosystem for physiotherapists and patients and integrated Zoho Mail for transactional notifications.
- Configured Firestore security rules and role-based authentication to protect sensitive clinical data and control application access.

Technical Skills

Languages: Python, SQL, JavaScript, TypeScript, HTML, CSS
Frontend: React, Next.js, Vite, React Router, Tailwind CSS, Framer Motion
Backend and Databases: Flask, PHP, Firebase, Firestore, MySQL, PostgreSQL, Supabase, REST APIs, PDO
Data Analytics and ML: Pandas, NumPy, Matplotlib, EDA, Data Preprocessing, Feature Engineering, Model Evaluation, CNN, ANN, NLP
Tools: Git, GitHub, Power BI, Excel, RDKit, DGL-LifeSci

Projects

Centre for Sports Science Website | *React, Vite, PHP, MySQL*

- Developed a responsive multi-page website with reusable components for Home, Services, Pricing, About, and Contact pages.
- Integrated a validated contact and enquiry form with a PHP/MySQL backend using PDO prepared statements.
- Resolved a production database-connectivity incident by isolating five root causes involving environment configuration, database host, API paths, permissions, and SPA rewrite rules.

Sports Science Engine | *Next.js, TypeScript, MySQL*

- Redesigned the admin dashboard and developed an inventory management interface backed by a MySQL relational schema.
- Built a scheduler to assign patients and athletes to specialists based on availability and treatment plans.
- Developed billing functionality for invoice generation, payment tracking, and financial reporting.

Hostel Management System | *Next.js, TypeScript, Supabase, PostgreSQL*

- Designed PostgreSQL migrations with role constraints, indexes, timestamp triggers, and automatic user-row creation after signup.
- Implemented role-based dashboards for six roles, with metadata-driven redirection and protected server-side routes using session checks.
- Added email and password validation and role-based access controls.

Molecular Structure Analysis and Drug Discovery | *Python, RDKit, DGL-LifeSci*

- Integrated pharmacogenomic and compound data from PubChem, ChEMBL, and GDSC2 into a unified processing workflow.
- Processed missing values and extracted molecular fingerprints and graph-based features from SMILES structures.
- Developed machine learning workflows to predict drug sensitivity using IC50 values.

Education

St Joseph's University 2024 – 2026
M.Sc. Big Data Analytics *Bengaluru, India*
St Joseph's University 2021 – 2024
B.Sc. Physics, Mathematics and Electronics *Bengaluru, India*
